

ALEX ANDRES

FULL-STACK WEB DEVELOPER

Dear Mr. Hurley,

During my experience as a working member of our society I have found that the finding the right career can bring so much meaning to one's life. That's why I was very excited when Preston Grochmal in your accounting department informed me that your are hiring a Front-End Engineer.

I am thrilled at the prospect of working for a company that brings fulfillment to so many people on a daily basis. I have always felt that one of the best ways to help people is to provide them with opportunities to help themselves. As a Front-End Engineer I would be able to contribute to this mission by providing your users with a fast, engaging, and reliable experience while using your web and native apps, through my expertise in your development stack.

Overcoming challenges and issues is something that makes being a developer so satisfying. One particular challenge I have had while developing one of my projects, was building a live distance tracking feature using the Google Maps API, for Wagtive, a gamified web app for pet owners to track walks and other activities. The feature relies on creating a continuously updating array of coordinates using a setTimeout function and drawing a line connecting those coordinates to show the user its route and distance traveled.

At my current position as Front End Web Support at WebStyle Inc. I focus on building and debugging websites for our small to medium business clients. I primarily work with HTML, Sass, PHP, JavaScript, jQuery and Adobe Creative Cloud Applications. I am continually honing my skills and always looking to learn new ones. I am relatively new to the field of web development but what I lack in experience I make up for with persistence and a methodical approach to solving problems. Given the chance I believe I would be a great fit on your engineering team, and would relish the opportunity to help so many people through your platform.

Sincerely

Alex Andres
